

Sight Word Concentration or "Memory"

- Make two word cards of each of the words needing to be learned
- Lay shuffled cards (10 pairs at a time) face down in rows and columns on table in front of you
- Player 1 turns over 2 cards
- If player 1 makes a match and can read the word, he or she keeps that match
- Player 1 continues playing until the selections do not match or he or she can't read the word
- Continue using the same steps for player 2
- The game ends when all cards are matched. The player with the most pairs of matched cards is the winner.
